

# Urban Freeway Corridor Operations Study

## Study Area

### RTC

**Project Completed:  
June 2020**

### Project Information

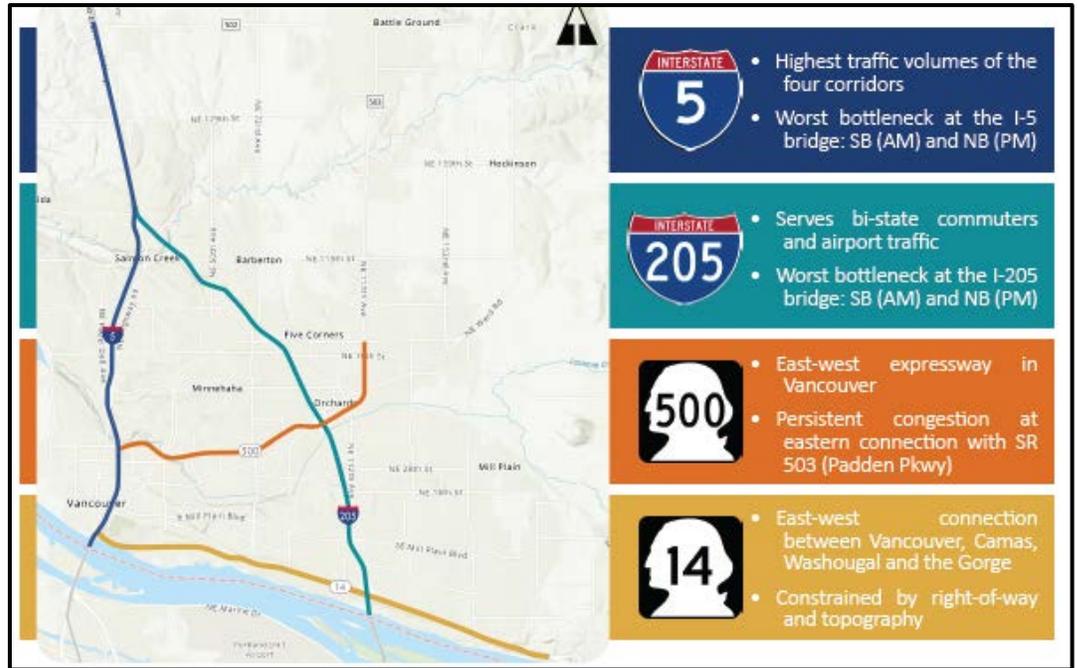

RTC funding: \$215,000  
in STBG Funds

Total Project Cost:  
\$400,000

Project Type: Operations  
and Management  
Planning

Project Length: N/A

Function Class:  
Interstate/Expressway

### Project Description

The UFCO Study analyzed near term operational and system management improvements that could serve to make the transportation system operate more efficiently and predictably. The strategies include approaches to get the most out of the existing system with low cost capital improvements and technology-based traffic management tools to optimize the flow of traffic and maximize available capacity. The Study report consists of a tiered set of strategy recommendations with detailed information sheets on the relative benefits to operations, safety and cost for each strategy.

### Project Benefits

The tiered set of strategy recommendations provides both flexibility and guidance to WSDOT in prioritizing investment in selecting beneficial strategies from the tiers that align with specific system needs, funding sources, and existing and future priorities

### Project Funding

Phase	Year	Federal Funds	Other Funds	Total
Design	2020	\$215,000	\$185,000	\$400,000
Right of Way				\$0
Construction				\$0
<b>Total</b>		<b>\$215,000</b>	<b>\$185,000</b>	<b>\$400,000</b>
